1. project folder creation.
2. project folder न किया cmd मिठ न code editor open.
3. virtual environment creation using code →
    python -m venv env
4. virtual environment app activation using code →
    env\ Scripts\ activate
5. django installation in this project folder.
    pip install Django
6. project creation in project folder by using code.
    django - admin startproject Main. (Manage.py created)
    folder
7. App creation in project by using code.
    python manage.py startapp APP
8. server run by using code.
    python manage.py runserver

Project create रा admin रो (django - admin).

python manage.py migrate.

app

App introducing in project by

(Settings)

code editor →

↳ project (Main)
↳ settings
↳ Install APPS

```
[ - - - - - - - ,
    'APP' ,
]
```

urls

creating urls.py file in App

copy paste   from django.urls import path
blank →   urlpatterns = [

introducing app urls] in project urls.

from django.urls import path, include

```
= [ - - - - - ,
    path('', include('App.urls')),
]
```

views

views creation. Setup.

from django.http import HTTP Response

def First (request):
    return HTTP Response ('html code')

—timelim and url done defined

App urls

from django.urls import path

from .views import * I import from views

url patterns = [
    I path (' ' , function name (First), name = 'first')
                                              just bila na id

    'first/'

* django. views — लिस्ट सारा आता।
